The global financial crisis and subsequent sovereign debt crisis in Europe demonstrated that the relationship between law and economics in the design of the monetary system must be revisited. International monetary affairs are usually conducted via domestic monetary policies which are formulated by independent central banks and informed mainly by economics, without much room being left to substantive law. It explores the links between and lessons to be learnt from existing international investment and trading systems and studies some specific policy issues which have a direct impact on monetary affairs, such as exchange rate policy, sovereign debt, taxation, competitiveness, trade imbalances, austerity programmes and human rights.
