Regression: Linear Models in Statistics (Springer Undergraduate Mathematics Series) N. H. Bingham, John M. Fry

Regression is the branch of Statistics in which a dependent variable of interest is modelled as a linear combination of one or more predictor variables, together with a random error. The subject is inherently two- or higher- dimensional, thus an understanding of Statistics in one dimension is essential.

Regression: Linear Models in Statistics fills the gap between introductory statistical theory and more specialist sources of information. In doing so, it provides the reader with a number of worked examples, and exercises with full solutions.

The book begins with simple linear regression (one predictor variable), and analysis of variance (ANOVA), and then further explores the area through inclusion of topics such as multiple linear regression (several predictor variables) and analysis of covariance (ANCOVA). The book concludes with special topics such as non-parametric regression and mixed models, time series, spatial processes and design of experiments.

Aimed at 2nd and 3rd year undergraduates studying *Statistics, Regression: Linear Models in Statistics* requires a basic knowledge of (one-dimensional) Statistics, as well as Probability and standard Linear Algebra. Possible companions include John Haigh's Probability Models, and T. S. Blyth & E.F. Robertsons' Basic Linear Algebra and Further Linear Algebra.

From reader reviews:

Leticia Hodges:

The e-book untitled Regression: Linear Models in Statistics (Springer Undergraduate Mathematics Series) is the e-book that recommended to you to see. You can see the quality of the reserve content that will be shown to you actually. The language that article author use to explained their ideas are easily to understand. The article writer was did a lot of exploration when write the book, hence the information that they share to you is absolutely accurate. You also could possibly get the e-book of Regression: Linear Models in Statistics (Springer Undergraduate Mathematics Series) from the publisher to make you far more enjoy free time.

Violet Shook:

In this period of time globalization it is important to someone to receive information. The information will make a professional understand the condition of the world. The healthiness of the world makes the information better to share. You can find a lot of sources to get information example: internet, newspapers, book, and soon. You can observe that now, a lot of publisher this print many kinds of book. The book that recommended to your account is Regression: Linear Models in Statistics (Springer Undergraduate Mathematics Series) this book consist a lot of the information from the condition of this world now. This kind of book was represented how does the world has grown up. The dialect styles that writer value to explain it is easy to understand. The particular writer made some exploration when he makes this book. Honestly, that is why this book appropriate all of you.

Belinda Bedard:

Is it an individual who having spare time subsequently spend it whole day by watching television programs or just laying on the bed? Do you need something new? This Regression: Linear Models in Statistics (Springer Undergraduate Mathematics Series) can be the response, oh how comes? It's a book you know. You are consequently out of date, spending your extra time by reading in this fresh era is common not a geek activity. So what these guides have than the others?

Willie Carlos:

Within this era which is the greater man or who has ability to do something more are more treasured than other. Do you want to become one of it? It is just simple solution to have that. What you should do is just spending your time very little but quite enough to possess a look at some books. One of many books in the top listing in your reading list is Regression: Linear Models in Statistics (Springer Undergraduate Mathematics Series). This book that is certainly qualified as The Hungry Hillsides can get you closer in becoming precious person. By looking upward and review this reserve you can get many advantages.
