Software Engineering: Architecture-driven Software Development

Richard F Schmidt

Software Engineering: Architecture-driven Software Development Richard F Schmidt

Software Engineering: Architecture-driven Software Development is the first comprehensive guide to the underlying skills embodied in the IEEE's Software Engineering Body of Knowledge (SWEBOK) standard. Standards expert Richard Schmidt explains the traditional software engineering practices recognized for developing projects for government or corporate systems.

Software engineering education often lacks standardization, with many institutions focusing on implementation rather than design as it impacts product architecture. Many graduates join the workforce with incomplete skills, leading to software projects that either fail outright or run woefully over budget and behind schedule.

Additionally, software engineers need to understand system engineering and architecture—the hardware and peripherals their programs will run on. This issue will only grow in importance as more programs leverage parallel computing, requiring an understanding of the parallel capabilities of processors and hardware. This book gives both software developers and system engineers key insights into how their skillsets support and complement each other. With a focus on these key knowledge areas, *Software Engineering* offers a set of best practices that can be applied to any industry or domain involved in developing software products.

- A thorough, integrated compilation on the engineering of software products, addressing the majority of the standard knowledge areas and topics
- Offers best practices focused on those key skills common to many industries and domains that develop software
- Learn how software engineering relates to systems engineering for better communication with other engineering professionals within a project environment

From reader reviews:

Rosa Reid:

Now a day people who Living in the era where everything reachable by match the internet and the resources in it can be true or not involve people to be aware of each facts they get. How many people to be smart in having any information nowadays? Of course the solution is reading a book. Looking at a book can help people out of this uncertainty Information specifically this Software Engineering: Architecture-driven Software Development book since this book offers you rich data and knowledge. Of course the data in this book hundred per cent guarantees there is no doubt in it you probably know this.

Chris Robins:

This Software Engineering: Architecture-driven Software Development is great e-book for you because the content which is full of information for you who have always deal with world and have to make decision every minute. That book reveal it details accurately using great arrange word or we can state no rambling sentences included. So if you are read the idea hurriedly you can have whole information in it. Doesn't mean it only provides you with straight forward sentences but tough core information with wonderful delivering sentences. Having Software Engineering: Architecture-driven Software Development in your hand like finding the world in your arm, details in it is not ridiculous 1. We can say that no e-book that offer you world within ten or fifteen small right but this publication already do that. So , this is certainly good reading book. Hey there Mr. and Mrs. busy do you still doubt this?

Walter Feuerstein:

As a college student exactly feel bored to help reading. If their teacher requested them to go to the library or make summary for some reserve, they are complained. Just small students that has reading's heart or real their hobby. They just do what the teacher want, like asked to go to the library. They go to right now there but nothing reading really. Any students feel that looking at is not important, boring along with can't see colorful images on there. Yeah, it is for being complicated. Book is very important for you personally. As we know that on this period, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. Therefore , this Software Engineering: Architecture-driven Software Development can make you sense more interested to read.

Drew Dube:

A number of people said that they feel bored when they reading a e-book. They are directly felt the idea when they get a half areas of the book. You can choose the particular book Software Engineering: Architecture-driven Software Development to make your reading is interesting. Your skill of reading talent is developing when you including reading. Try to choose easy book to make you enjoy to study it and mingle the impression about book and examining especially. It is to be 1st opinion for you to like to open a book and examine it. Beside that the guide Software Engineering: Architecture-driven Software Development can to

be your new friend when you're experience alone and confuse with what must you're doing of this time.
