Coupled Models for the Hydrological Cycle: Integrating Atmosphere, Biosphere and Pedosphere

Coupled Models for the Hydrological Cycle: Integrating Atmosphere, Biosphere and Pedosphere

This book considers an array of state-of-the-art coupling and modelling concepts. First the relevant Earth system cycles are presented, followed by a discussion on scale issues and multiple equilibria. Inter- and intra-compartmental coupling is addressed, along with a debate on non-linearities and questions of parameterisation. Several applications are presented, where a focus is on cases where the hydrological cycle plays a central role.
